

Hanover Trade Fair 2017

As in previous years, Lüttgens was an exhibitor at this year's Hanover Fair, meeting and greeting visitors to our 20 m² booth from 24 - 28 April 2017. This year's show, held under the overall theme "Industry 4.0", attracted over 225,000 trade visitors interested in products and services offered by 6,500 exhibitors from 70 nations. Lüttgens displayed a wide range of complex plastic parts and component groups including "live production" and assembly of a shopping-cart coin keychain.

Plastics Technology Forum in Engelskirchen

22 - 23 June 2017: The Barlog Group, host of the 21st annual Plastics EKKT Plastics Technology Forum, defined the central theme of this year's forum as "**Digitalisation in the Plastics Processing Industry – Opportunity, Risk or Business as Usual?**". Frank Verhoeven and Marco Spornhauer were on hand at our booth there, informing visitors about our company and products in numerous engaging conversations with

industry experts and interested forum participants. Lüttgens is already laying the groundwork for changes in business processes which pave the way to enhanced future productivity. Systematic networking of our production machines by an Arburg control centre and incorporation of a new ERP system will permit more efficient utilisation of process data throughout the entire value chain as well as substantial streamlining and optimisation of our business processes. This will become easier to implement as we realise closer

customer-supplier relationships and expanded customer access to our systems in the future. We are working "full steam ahead" and will keep you updated on progress in this regard as we move forward.

Thanks very much for your visit!
